

TOP ON-AGRO FIRM

FISHERIES & AQUACULTURE

A family-led fisheries business built around patient growth, responsible farm management and a clear journey from fish eggs and young stock to market-size fish.

Established in 2020 • Approx. 40 acres

Sustaining Nature. | Nourishing Life.

ABOUT TOP ON-AGRO FIRM

A simple family business story with a long-term view.

Our Fisheries Story

Top On-Agro Firm began its fisheries activities in 2020 and has grown into a substantial family-operated fisheries platform covering approximately 40 acres of land.

The business follows a practical production cycle: starting from fish eggs/spawn and young fish, nurturing them through the early growth stages, and ultimately preparing healthy market-size fish for sale.

The business is closely monitored within the family, with Mr. Noor Mohammad Gazi providing hands-on oversight and regularly discussing operational matters with the next generation.

OUR FISHERIES AT A GLANCE

The scale is important—but so is the continuity behind it.

2020

Fisheries Journey

Activities started and have continued as a family business.

≈ 40

Acres Under Operation

Approximate land area associated with the current fisheries activities.

**FULL
CYCLE**

Production Model

From eggs/spawn and young fish through grow-out to market.

FAMILY

Management

Day-to-day oversight is supported by family experience and discussion.

FROM EGGS TO MARKET

An easy-to-understand view of the fisheries production journey.

FROM LIFE TO LIVELIHOOD

A simple, connected fisheries journey

The focus is on steady growth through each stage—protecting the value created at the beginning until the fish are ready for the market.

EARLY GROWTH: FRY & FINGERLINGS

The foundation of a successful grow-out cycle.

NURSERY • FRY • FINGERLINGS

01 Eggs / Spawn

The production journey begins with the earliest life stage and careful transition into young fish.

02 Fry

Small fish are nurtured through the early growth period before moving into the next stage.

03 Fingerlings

Young fish are developed to a stronger, more suitable size for continued grow-out.

GROW-OUT & FISH DEVELOPMENT

Turning young stock into market-ready fish through time, care and monitoring.

The Grow-Out Stage

After the early stages, fish are moved into the larger farming environment where they continue to grow toward market size.

This stage represents the largest part of the production cycle and requires consistent attention to the farm, fish growth and overall operational condition.

A long-term approach: grow well, harvest at the right stage, and protect product quality.

FARM MANAGEMENT APPROACH

Practical oversight supported by family experience.

Pond & Farm Oversight

Regular attention to the condition of the fisheries operation and its production cycle.

Fish Growth Monitoring

Following the movement of fish from young stock toward market size.

Operational Discussion

Key matters are monitored and discussed within the family before decisions are taken.

Continuity & Responsibility

The business is managed with a long-term family perspective rather than a short-term approach.

The points above describe the family-led operating philosophy; specific technical practices can be added once farm records are confirmed.

HARVEST TO MARKET

The final step is delivering the value created through the full production cycle.

Market-Ready Fish

Once the fish reach an appropriate market size, they are harvested and supplied to the market.

This creates a direct connection between farm management, production planning and the final customer demand.

FARM → GROWTH → HARVEST → MARKET

FAMILY-LED BUSINESS

Experience, trust and discussion are at the heart of the operation.

Mr. Noor Mohammad Gazi

Family Fisheries Oversight

Mr. Noor Mohammad Gazi, the Top On Group CEO's father, monitors the fisheries activities and remains actively involved in discussing the business and its operational matters with the next generation.

This family connection gives the business a strong sense of continuity, accountability and personal involvement.

A business built to grow across generations.

MISSION & VISION

OUR MISSION

To grow and supply quality fish through a responsible, family-led fisheries operation—creating value through every stage from young stock to market-ready fish.

OUR VISION

To develop Top On-Agro Firm into a trusted and sustainable fisheries platform, combining family experience, responsible management and long-term growth.

Sustaining Nature. | Nourishing Life.

OUR VALUES

The principles we want the business to be known for.

RESPONSIBILITY

We take ownership of the farm, the fish and the long-term health of the business.

QUALITY

We value healthy growth and market-ready fish that create confidence for buyers.

INTEGRITY

We believe family reputation is built through honest and responsible business.

CONTINUITY

We think beyond one production cycle and build for the next generation.

CARE

Good fisheries work requires patience, attention and respect for nature.

GROWTH

We aim to expand sustainably while protecting the foundations of the business.
